The Secure On-Premise Voice Recognition Solution

In a commitment to be the vendor of choice for consumers seeking product accessibility, Xerox® and Gabi Solutions have formed a strategic partnership in support of a 508c solution for your Xerox AltaLink® Multifunction Printer (MFP).

Powered by a secure, on-premise server, Gabi Gov allows users, including those with disabilities, to operate the Multifunction Printer using natural language and without the need to interact with the user interface. By using the wake-up word, "Hey Gabi," you can now direct your Xerox® MFP to make copies, send emails and faxes, release secure prints, and more.

Why Gabi Gov?

The hardcopy data you process through your Xerox MFP is extremely sensitive. Information handled via voice commands through the on-premise Gabi Gov Smartbox are interpreted securely and accurately against whitelisted commands. Voice data and transcription is never transferred from the Smartbox.

Any speech-to-text from parsing audio data is generated at run-time and never saved.

Gabi Gov complies with Federal 508c compliance terms enabling the visually impaired and those with learning disabilities to use the MFP's features via natural language.

Disabled workers can now vocalize voice commands through Gabi and watch their MFP execute them flawlessly whether it be making a copy, checking your toner levels and sending an email.

Getting Started with Gabi Gov – What's Included?

When unboxing your Gabi Gov package, you'll receive the following components:

1-to-1 Gabi Smartbox: Equipped with the latest Smartbox, you'll have a 2-in-1 solution combining your speaker and electrical components within a single case protected with a kill-switch in the event its internals within your Smartbox are tampered with making it the most convenient and secure case yet.

Power: 5.1v micro USB power adapter UL approved to power up your Gabi Smartbox at all times.

Server Software: On-premise server responsible for distributing updates and managing Smartboxes.
